Assignment 1101 Feedback

Britain Southwick

Congratulations on spotting the lowest-hanging fruit among the available tasks and cornering it ahead of the others :) That counts for something! Your verbal suggestions about where this code goes, given what others have committed and the overall pattern they indicate, also help me see that you understand what is going on beyond your specific work.

3a — Despite the small amount of final generated code, doing this correctly required a decent understanding of what was already there. Your recognition of how this code should change as the rest of the user interface gets implemented also demonstrates further good understanding. (+)

3b — You didn't explicitly have to write event code here, but you had to understand enough to spot where your change needed to be made. (+)

3c — You didn't have to touch much MVC here, but at least you also knew not to break anything :) (+)

4a — The added code was certainly correct and functional. That `remove` call could have been consolidated into a combined selector though (hey I had to find something :)). (|)

4b — As mentioned in *3c* no issues with MVC in your code. (+)

4c — Three lines—very easy to understand :) But even within those lines you had a single spacing inconsistency. For that little code, this shouldn't even be an issue! (|)

4d — Successful implementation shows good use of available resources and documentation. (+)

4e — Number of commits is appropriate to the work involved. Messages are clear and descriptive. You did have a couple of faux pas with your commits though, deleting files that should not have been removed. Be more watchful of that next time. `git status` is your friend! (|)

4f — Submitted on time. (+)
