Assignment 1016 Feedback

Britain Southwick

3a — Your code shows a decent understanding of user interface structure and layout. (+)

3c — Your code shows understanding (or, at least, compliance) with MVC as it applies to web pages. (+)

4a — Your code validates and is functionally correct. I did find that your CSS has some repetitions; multiple elements with the same properties should be combined into a `class` or at the very least a comma-separated list of CSS selectors. This makes the properties easier to edit when needed because there are no duplicates to worry about. Other than that, things look pretty good. (|)

4b — You separated the HTML, CSS, and external JavaScript in your pages quite well. (+)

4c — Your code is generally clear and easy to read, with reasonable comments at places that appropriately need explanation. Your spacing is inconsistent however, and in some cases too tight, especially in your CSS. You should place one space before the opening left-brace in a CSS block, and consistently place one blank line between blocks; maybe more if you want to separate sections of CSS, ideally with comments. (|)

4d — Your code shows that you figured out a good number of things on your own. (+)

4e — Excellent commit pacing and messages. (+)

4f — Submitted on time. (+)
